Hello, Group

I forgot to mention that there is a new charting tool - equidistance vertical lines:

You can draw vertical lines located at the equal distance.

For example, you can easy check whether three consequent top turning points are located on the same distance:

In today's BETA version you can add overtones (the lines located between the major lines):

So, now we have the whole palitra of cyclic analysis tools starting from the simplest charting tools, then adding Easy Cycle features and Spectrum analysis.

Best regards.
Sergey.
