Hello, Group

I received two questions:

1) If while running QuoteTracker (QT) data manager, you get this message:

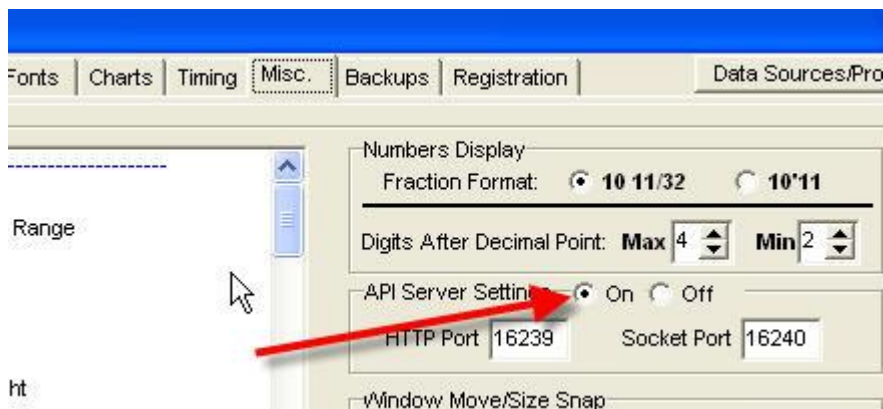

It means that you need:

- a) run QT software previously;
- b) In QT software, in Options

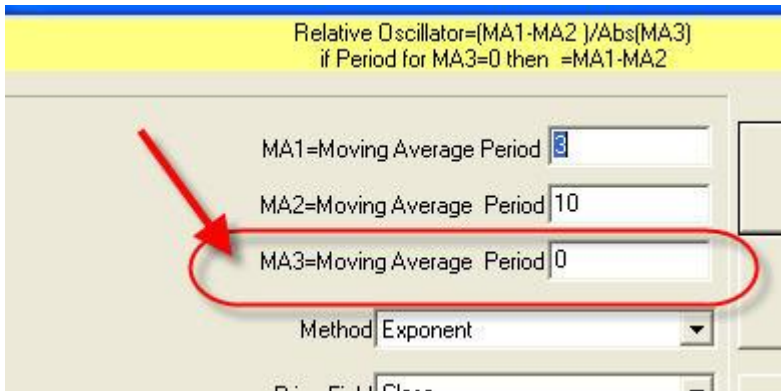

set this parameter ON:

When these two steps are done, QT software is ready to be linked with other software.

2) If you create this oscillator with MA3=0:

the program skips MA3 moving average. In other words it calculates this oscillator as MA(Period=3)-MA(Period=10) (as upper yellow panel points).

Best regards.
Sergey.
