Subject: [timingsolution] Answers, part 2

There is one more answer:

I have a feeling I asked this before because I have a print out back in 2000. How do I print out a list of dates where an angle is made between two planets. Example, I exploring the 17 harmonic between variuos planets. How can I print out a list of dates when the 17 harmonic between 2 planets happens? **As I understand it is necessary to find when any two planets make 17H aspect (for example, conjunction).**

Set this event in ULE (SuperSearch):

Calculate and and run "Document Designer" to print out this list:
