Subject: [timingsolution] Square of Nine

Hello, Group

The pilot version of Square of Nine (SQ9) module is available in today's upgrade (Jun. 5).

You can run it here:

Here you can click mouse anywhere (for example, on 246), and the program will mark the price levels according the angle chosen in "Mouse Action" panel:

The screenshot displays a large grid of numbers from 1266 to 1198. A red arrow labeled "Click here" points to the number 246. The right-hand side of the interface features a control panel with the following elements:

- Figure:** Kind: Square of Nine; Start: 1; Step: 1; Scale \$1= 1; points on diagram.
- View:** Width: 18; Font: 11.
- Mouse Action:** Clear Selection; Mark 120 degree (selected); Main Screen: No Action; 3.
- Planetary Positions:** Show Planet Position (checked); Symbol (checked).

You can use 45, 60, 90 and 120 degrees angles.

Also it is possible to draw the planetary positions:

The image shows a software interface with a grid of numbers on the left and a control panel on the right. A red arrow labeled "View" points to the "Figure" section of the panel, which includes "Kind: Square of Nine", "Start: 1", "Step: 1", and "Scale \$1= 1". Another red arrow labeled "Planetary position" points to the "Planetary Positions" section, which shows "06.01.2007 SA" and checkboxes for "Show Planet Position" and "Symbol", with "Sun", "Moon", "Mars", "Jupiter", "Neptune", and "Pluto" selected.

To define the transit data for this position, click mouse in the Main screen or set this data manually (use the clock button in "Planetary Positions" panel).

Try View options as well: Width defines how many rounds will be seen, Font is the font size for numbers.

Best regards.
Sergey.
