Subject: [timingsolution] Upgrade March 6, 2007

Hello, Group:

The new upgrade is available. You will find there:

1) it is possible to read monthly data:

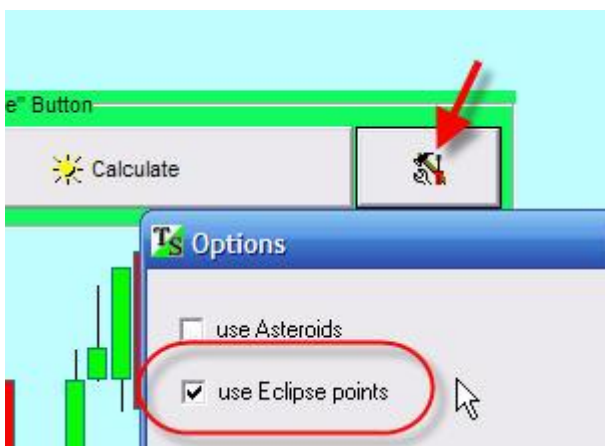

Now TS supports more than 600 different text formats.

2) The module to calculate the eclipse point and include it into ULE/SuperSearch is activated now. I kept it inactive because it needs a lot of calculations; it is too slow on slow computers. Now computers are faster, and we can use this module.

In Options, define the minimal coverage for the eclipse point, i.e. the eclipse's strength:

Please keep in mind that there are two algorithms to calculate the eclipse: one is related to any location, while the second relates to the exchange's coordinates. Before any calculations, set this option on:

Also, please bear in mind that there are two eclipse points that are worth to be considered - the latest eclipse and the next eclipse:

When the eclipse point is defined, you can use it in a usual way, creating aspects to it, etc.

Best regards,

Sergey
